

Jacob Moore

Full Stack Web Developer

Extremely self motivated Boston based web developer. Completely self taught with forays into formal education. While geared for the future I am always looking to learn from the past because in life much like programming nothing is stagnant, all things are fluid and because of this I will never stop moving forward despite everything that stands before me.

WORK EXPERIENCE

Riverside Sheet Metal Lead Welder

02/2014 – Present

Medford, MA

Custom Architectural Metal Fabrication

Achievements/Tasks

- Consistently met projected deadlines.
- Worked as a team with five other fabricators to complete projects worth upwards of \$100,000. [↗](#)
- Accounted all materials used, ordering more when needed.
- Oversaw the training of apprentice metal fabricators and welders.
- Lead welder responsible for using basic chemistry in the joining of dissimilar metal combinations with differential melting points to create a seamless finished product.
- Programmed and maintained two Baileigh Hydraulic Press Brakes and accompanying touch screen integration systems.

EDUCATION

Bunker Hill Community College Computer Science

2015 – 2016

Boston, MA

The Odin Project

Open source web development curriculum [↗](#)

01/2017 – 02/2018

The Complete Node.js Developer Course

Covers the fundamentals of Node before moving onto Express, Mongoose, and MongoDB. [↗](#)

02/2018 – Present

Wes Bos React JS Introduction Course

Demonstrates the building blocks of React paired with Firebase to build real time applications. [↗](#)

01/2018 – Present

SKILLS

Ruby

Ruby on Rails

Javascript ES6

React JS

HTML5

CSS3

Git Version Control

Heroku Deployment

NPM

SQL

TDD

PERSONAL PROJECTS

Chess

- Wrote a fully functional two player command line version of chess in Ruby. Implementing advanced game mechanics such as pawn promotion, castling, el passant.

Weather App

- Simple strait forward application utilizing the Openweathermap API. Receives data for displaying the current weather for any given zip code in USA using Javascript. Features include a 5 day forecast and different backgrounds dependent on the time of day.

Jakebook

- Facebook clone written with the Ruby on Rails framework . All user authentications were done using Devise with added Sign in functionality implemented using the industry standard OAuth for further authorization protocols. Featured fully functioning profile page with avatar, and news feed with all major expected functionalities of its predecessor included.

ACHIEVEMENTS

The Odin Project (01/2017 – 02/2018)

I am exceptionally proud of this accomplishment. I completed 57 different coding projects and finished 100% of the curriculum's material in less than a year while maintaining a full time job. Many have attempted completion few have succeeded.
